Subject: AE discussion followup up - Elk Hills Power Class I

Hi Jerry,

I pulled this excerpt out of the UIC Class I application

“There are ten active Class II UIC wells disposing of oil field wastewater into the Tulare formation located in the project AOR. These wells are 85-WD-13B, 87WD-13D, 27WDWD-18G, 37WD-18G, 54WD-18G, 54XWD-18G, 56WD-18G, 57WD-18G, 64XWD-18G and 67WD-18G.”

Taking care of these Class II injection wells would likely address the Class I issue as well.

Sincerely,

Michele
